SUMMARY

Full Stack Developer building web applications end to end, with backend work at the centre of what I do: designing database schemas, REST APIs, authentication and role-based access control across PHP/Laravel, Python and Node.js. On the frontend I work TypeScript-first with React and Next.js, building component-driven interfaces around performance and usability. Experienced across the modern platform layer, including SQL and NoSQL databases, Docker, Supabase, Vercel and third-party API integrations, which is what makes it possible to take a SaaS product, an internal tool or a client-facing web app from idea to production quickly. Currently focused on AI-powered web applications and agentic automation workflows.

EXPERIENCE

Full Stack Developer, Odyssey Capital

April 2026 – Present

İzmir, Türkiye · Remote

Building B2B products across the stack: CRM and LMS platforms alongside custom client applications.

- Develop with PHP/Laravel on the backend and JavaScript on the frontend, including vanilla JS where a framework isn't warranted
- Design and consume REST APIs: endpoints with authentication and validation, integrated on the frontend with proper loading and error handling
- Integrate third-party services for payments, authentication, messaging and storage, covering token handling, webhooks, and cross-platform data sync
- Handle frontend and UI/UX work in parallel with backend development; design SQL schemas and queries with performance in mind
- Work in Dockerized environments and contribute to Flutter mobile clients sharing the same APIs
- Build AI workflows and automations using n8n pipelines and MCP integrations to remove manual steps from client operations

Freelance Web Developer, Self-Employed

February 2025 – April 2026

Remote

Owned the full cycle solo: scoping, architecture, development, deployment and ongoing support.

- Built and shipped 3 SaaS products end to end: a multi-tenant QR menu platform, an integrated POS system, and a real estate CRM
- Delivered custom software for companies and individual clients based on direct discovery conversations, translating operational pain points into internal tools and CRM-style systems
- Developed 5+ production websites, including corporate sites, CMS-driven blogs, and an e-commerce platform with product management, cart and payment flows
- Integrated third-party APIs for payments, authentication, storage and analytics, and built the internal APIs tying these systems together
- Delivered agentic workflow and automation solutions with n8n, eliminating repetitive manual processes for clients

Web Developer & Instructor, Neos Yazılım Akademi

September 2023 – July 2024

İzmir, Türkiye · On-site

Taught full stack web development in an intensive bootcamp program, taking students from zero to job-ready.

- Owned the backend curriculum: Python and Django fundamentals, models and ORM, REST APIs, authentication and database design
- Taught the frontend track across HTML, CSS, JavaScript and React
- Led students through building real projects end to end, including a full e-commerce application with catalog, checkout, user accounts and admin panel
- Mentored students one-on-one through debugging, code review and architectural decisions

FEATURED PROJECTS

EfesMenu

Multi-tenant QR menu SaaS · efesmenu.com

Efes POS

Point-of-sale system · efesmenu.com/efespos

Emlak CRM

Real estate CRM · emlak-crm-demo.vercel.app

Client Websites & CMS Platforms

kallinosco.com · ozenacademy.com · ciltakademisi.com

SKILLS

Frontend: React · Next.js · TypeScript · JavaScript · Tailwind CSS · UI/UX

Backend: PHP · Laravel · Node.js · Python · Django · REST API design

Data & Infra: PostgreSQL · MySQL · MongoDB · Supabase · Docker · Vercel · Git

Other: AI-powered applications · MCP integrations · n8n automation · Flutter

EDUCATION

Computer Programming, Muğla Sıtkı Koçman University

2023

Muğla, Türkiye
